

In the Claims:

Please amend claim 24 as follows:

24. (Once Amended) A fluid injection apparatus comprising:  
at least one drive mechanism;  
at least two fluid containers operably associated with the at least one drive mechanism, one fluid container containing a contrast medium and the other fluid container containing a flushing medium; and  
a control device operably associated with the at least one drive mechanism, the control device operable to selectively program a plurality of phases of an injection procedure, each of the plurality of phases comprising at least one of a contrast medium phase, a flushing medium phase and a KVO phase.
